Php App Fine tuning and Deployment(Docker, Php-Fpm, Nginx, Supervisor, Cronjobs)

Step 1: Create a custom PHP settings file:

```
Touch custom-php-setting.ini
max_execution_time=300
upload_max_filesize=30M
post_max_size=120M
```

Step 2: Create a custom File for cronjobs in cron folder:

Touch laravel-cron

Step 3: Create a custom File for php-fpm

Touch custom-fpm-setting.conf

[www]

; Unix user/group of the child processes.

user = www-data

group = www-data

; The address on which to accept FastCGI requests.

listen = 127.0.0.1:9000

; Process management settings pm = dynamic pm.max_children = 20 pm.start_servers = 5 pm.min_spare_servers = 3 pm.max_spare_servers = 10

Step4: Create a supervisor configuration file(php-artisan.conf inside supervisor folder):

```
php-artisan.conf 2.00 KiB

[supervisord]
nodaemon=true
logfile=/var/log/supervisord.log
pidfile=/var/run/supervisord.pid
childlogdir=/var/log/
user=root

[program:php-fpm]
process_name=%(program_name)s
command=php-fpm --nodaemonize
autostart=true
autorestart=true
user=root

redirect_stderr=true
stdout_logfile=/var/log/php-fpm.log
priority=5
```

```
18 [program:nginx]
19 process_name=%(program_name)s
20 command= /bin/sh -c "sleep 3 && nginx -g 'daemon off;'"
21 autostart=true
22 autorestart=true
23 user=root
24 redirect_stderr=true
25 stdout_logfile=/var/log/nginx.log
26 priority=10
27
28 [program:php-horizon]
29
   process_name=%(program_name)s
30 command=/usr/local/bin/php /var/www/html/artisan horizon
31 autostart=true
32 autorestart=true
33 user=root
34 redirect_stderr=true
35 stdout_logfile=/var/log/horizon.log
36 priority=20
37
38 [program:kafka-message-event]
39 process_name=%(program_name)s
40 command=/usr/local/bin/php /var/www/html/artisan kafka:message-event
41 autostart=true
42 autorestart=true
43 user=root
44 redirect_stderr=true
45 stdout_logfile=/var/log/kafka-message-event.log
46 priority=20
```

```
58 [program:kafka-chat-event]
59 process_name=%(program_name)s
60 command=/usr/local/bin/php /var/www/html/artisan kafka:chat-event
61 autostart=true
62 autorestart=true
63 user=root
64 redirect_stderr=true
65 stdout_logfile=/var/log/kafka-chat-event.log
66 priority=20
67
68 [program:kafka-integration-event]
69 process_name=%(program_name)s
70 command=/usr/local/bin/php /var/www/html/artisan kafka:integration-event
71 autostart=true
72 autorestart=true
73 user=root
74 redirect_stderr=true
75 stdout_logfile=/var/log/kafka-integration-event.log
76 priority=20
77
78
79 [program:laravel-cron]
80 command=crond -f -L /var/log/cron.log crond
81 autostart=true
82 autorestart=true
83 stdout_logfile=/var/log/cron.stdout.log
84 stderr_logfile=/var/log/cron.stderr.log
85 user=root
86 priority=30
87
```

Step5: create nginx configuration file:

Touch nginx.conf

```
□ □ ▼
pinx.conf 1.58 KiB
       1 user nginx;
       2
          worker_processes auto;
          error_log /var/log/nginx/error.log warn;
       4
       5
                     /var/run/nginx.pid;
       7
          events {
       8
              worker_connections 1024;
          }
       9
      10
      11 http {
                           /etc/nginx/mime.types;
      12
              include
      13
              default_type application/octet-stream;
      14
              sendfile
                            on;
      15
              keepalive_timeout 65;
      16
      17
              client_max_body_size 30M;
      18
      19
              server {
      20
                  listen 80;
      21
                  root /var/www/html/public;
      22
                  index index.php index.html;
      23
      24
                  add_header 'Access-Control-Allow-Origin' '*' always;
      25
                  add_header 'Access-Control-Allow-Methods' 'GET, POST, OPTIONS' always;
                  add_header 'Access-Control-Allow-Headers' 'Content-Type' always;
      26
                  add_header Strict-Transport-Security "max-age=31536000; includeSubDomains" always;
      27
      28
                  add_header Content-Security-Policy "frame-ancestors https://*.mybigcommerce.com https://*.bigcommerce.com
       location / {
           try_files $uri $uri/ /index.php?$query_string;
       location ~ \.php$ {
           include fastcgi_params;
           fastcgi_pass 127.0.0.1:9000;
           fastcgi_index index.php;
           fastcgi_param SCRIPT_FILENAME $document_root$fastcgi_script_name;
           fastcgi_param DOCUMENT_ROOT $document_root;
           fastcgi_read_timeout 300;
           add_header X-Frame-Options "SAMEORIGIN" always;
           add_header X-Content-Type-Options "nosniff" always;
           add_header X-XSS-Protection "1; mode=block" always;
       }
       location ~ /\.ht {
           deny all;
```

Step6: Create php-fpm dockerfile (Dockerfile copy all above files)

```
Dockerfile_staging 1.98 KiB
                                                                                                         # Base image
           FROM php:8.2-fpm-alpine
           # Set working directory
           WORKDIR /var/www/html
           # Install system dependencies + PHP extensions
           RUN apk add --no-cache \
               nginx supervisor gcc g++ make curl zip unzip git autoconf \
               libpng-dev libjpeg-turbo-dev libwebp-dev freetype-dev librdkafka-dev \
       11
               oniguruma-dev libxml2-dev icu-dev zlib-dev libzip-dev \
       12
               && docker-php-ext-configure gd \
       13
                   --with-freetype \
       14
                   --with-jpeg \
       15
                   --with-webp \
       16
               && docker-php-ext-install -j$(nproc) \
       17
                  gd pdo pdo_mysql mbstring xml intl zip bcmath opcache pcntl \
       18
               && pecl install rdkafka \
               && docker-php-ext-enable rdkafka
       19
       20
       21 # Install Composer
       22 COPY --from=composer:2 /usr/bin/composer /usr/bin/composer
       23 RUN ls -la
       24
       25 # Copy and activate development php.ini
       26 RUN cp /usr/local/etc/php/php.ini-production /usr/local/etc/php/php.ini
       27 COPY ./custom-php-setting.ini /usr/local/etc/php/conf.d/custom-php-setting.ini
29
     # Copy your custom nginx configuration
     COPY ./nginx.conf /etc/nginx/nginx.conf
32
     # Copy Supervisor configuration file
33
    COPY ./supervisor/php-artisan.conf /etc/supervisor/conf.d/php-artisan.conf
     # Copy Laravel cron file
    COPY ./cron/laravel-cron /etc/crontabs/root
36
37
    RUN chmod 0644 /etc/crontabs/root
38
     # Copy application code
40
    COPY . .
41
     # Mark /var/www/html as safe for git
     RUN git config --global --add safe.directory /var/www/html
45
    # Install PHP dependencies
46
     RUN composer install --no-interaction --prefer-dist --optimize-autoloader
48
    # Cache Laravel config/routes/views
49
    RUN php artisan config:clear && \
50
         php artisan migrate --force && \
51
         php artisan db:seed --class=PlansTableSeeder --force && \
52
        php artisan optimize
53
    # Set correct permissions
55
    RUN chown -R www-data:www-data /var/www/html && \
56
        \verb|chmod -R 775| / \verb|var/www/html/storage / \verb|var/www/html/bootstrap/cache| \\
57
58
59
    # Switch to non-root user
60
    USER root
61
62
    # Expose PHP-FPM port
    EXPOSE 80
    \verb|CMD| ["/usr/bin/supervisord", "-c", "/etc/supervisor/conf.d/php-artisan.conf"]| \\
67
```

Step 7: Run Docker file

Step 8: Test the Supervisor process inside Dockerfile

Supervisor is running everything

```
0.01 \ \{supervisord\} \ / usr/bin/python 3 \ / usr/bin/supervisord - c \ / etc/supervisor/conf.d/php-artisan.conf. A supervisor for the confidence of the c

  82 root
                                     0:01 /usr/local/bin/php artisan horizon:work redis --name=default --supervisor=ca5ee97d576c-YyaC:supervisor-1
  86 nginx
                                     0:00 nginx: worker process
  87 nginx
                                     0:00 nginx: worker process
                                     0:00 nginx: worker process
  88 nginx
                                     0:00 nginx: worker process
  89 nginx
                                     0:00 sh
  94 root
300 root
                                     0:00 [php]
```

Step 9: Edit Dockerfile and copy fpm setting

```
# Copy and activate production php.ini and custom php.ini
RUN cp /usr/local/etc/php/php.ini-production /usr/local/etc/php/php.ini
COPY ./custom-php-setting.ini /usr/local/etc/php/conf.d/custom-php-setting.ini
# Copy and activate custom fpm config
COPY ./custom-fpm-setting.conf /usr/local/etc/php-fpm.d/www.conf
```
